## 1. Úvod

Od jesene 2025 boli na Slovensku na skúšobných staniciach ÚKSÚPu založené skúšky registrovaných odrôd pšenice letnej, f. ozimná. Do skúšok sú zaradené odrody registrované v priebehu posledných troch rokov. Ich cieľom je overiť pestovateľskú hodnotu, produkčný potenciál a stabilitu odrôd v reálnych pestovateľských podmienkach a poskytnúť pestovateľskej praxi objektívnejšie a nezávislé informácie o ich vlastnostiach a pestovateľskej hodnote.

Význam skúšok registrovaných odrôd v súčasnosti narastá aj v súvislosti s pripravovaným nariadením Európskej únie o rastlinnom rozmnožovacom materiáli (Plant Reproductive Material – PRM), ktorého cieľom je podporiť šľachtenie a širšie využívanie odrôd s vysokou pestovateľskou hodnotou, lepšou adaptabilitou na meniace sa klimatické podmienky, vyššou odolnosťou voči biotickým a abiotickým vplyvom a efektívnejším využívaním poľnohospodárskych vstupov. V tejto súvislosti budú údaje získané zo skúšok registrovaných odrôd predstavovať významný zdroj informácií pre pestovateľskú prax.

Zároveň poskytujú informácie o ich prispôsobivosti v rôznych výrobných oblastiach Slovenska a o vhodnosti pestovania pri rozdielnej intenzite poľnohospodárskych vstupov. Výsledky skúšok by mali predstavovať nezávislý podklad pre pestovateľov pri výbere najvhodnejších odrôd do konkrétnych pestovateľských podmienok.

Skúšky registrovaných odrôd umožňujú overiť vlastnosti odrôd v podmienkach bežného pestovania. V skúškach sa hodnotí úrodový potenciál, stabilita úrod, odolnosť voči hospodársky významným chorobám, ako aj reakcia odrôd na biotické a abiotické vplyvy.

Pokusy sú založené na týchto troch skúšobných staniciach ÚKSÚP pokrývajúcich hlavné výrobné oblasti Slovenska:

- Skúšobná stanica ÚKSÚP Belža – kukuričná výrobná oblasť,
- Skúšobná stanica ÚKSÚP Veľké Ripňany – repná výrobná oblasť,
- Skúšobná stanica ÚKSÚP Víglaš – zemiaková výrobná oblasť,

Na posúdenie reakcie jednotlivých odrôd na rozdielnu intenzitu pestovania sú pokusy založené v dvoch úrovniach pestovateľských vstupov.

### **Varianta 1 – neošetrená**

- morenie osiva: áno
- hnojenie dusíkom: štandardná dávka
- fungicídna ochrana: bez aplikácie
- aplikácia morforegulátorov: bez aplikácie

### **Varianta 2 – ošetrená**

- morenie osiva: áno
- hnojenie dusíkom: štandardná dávka + dávka 30-40 kg N·ha<sup>-1</sup>
- fungicídna ochrana: dve aplikácie – T2 (do konca steblovania) a T3 (od začiatku klasenia do obdobia pred kvitnutím)
- aplikácia morforegulátorov: podľa potreby

## 2. Zoznam skúšaných odrôd /Survey of tested varieties

| Názov odrody/<br><i>Denomination</i> | Udržovateľ/ <i>Maintainer</i>                | Zástupca v SR/ <i>Representative</i>           | Registrácia/<br><i>Registration</i><br>SR |

8.6.2026 Mavrik 0,2 l/ha

**Varianta 2**

Predplodina: hrach siaty

Dátum sejby: 23.9.2025

Dátum zberu: 14.7.2026

Hnojenie N : 135 kg.č.ž.ha

Chemické ošetrovanie:

17.10.2025 Vaztak Pro 0,125 l/ha

11.3.2026 Sekator OD 015 l /ha

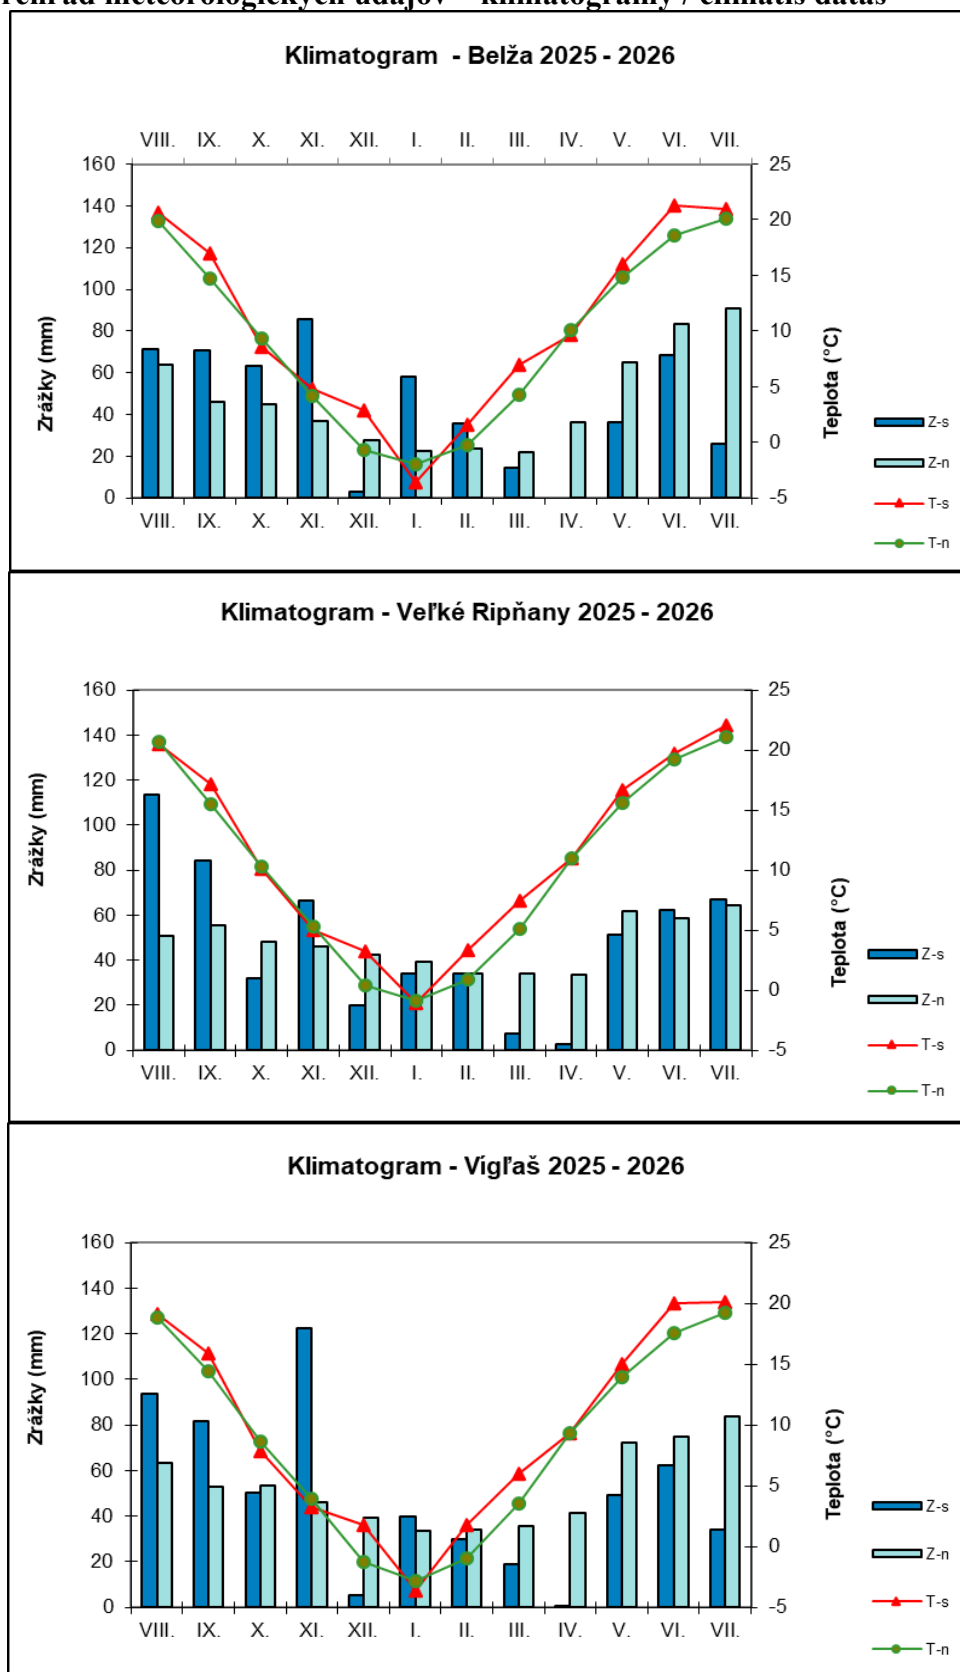

15.4.2026 Medax Top 0,8 l/ha

30.4.2026 Hutton 0,7 l/ha

14.5.2026 Hutton Forte 1,3 l/ha

8.6.2026 Mavrik 0,2 l/ha

## 5. Prehľad meteorologických údajov – klimatogramy / climatis datas

### Vysvetlivky / Explanatory notes

T-s skutočné priemerné teploty 2025-2026/ temperature in 2025-2026

T-n dlhodobý priemer/temperature long dated average

Z-s skutočné zrážky 2025-2026/ precipitation in 2025-2026

Z-n dlhodobý priemer zrážok/ precipitation long dated average

## 6. Spracovanie výsledkov

(Evaluating of results)

1. Relatívne úrody (%) hodnotených odrôd sú porovnávané na priemer pokusu v príslušnej lokalite. Posledný stĺpec v tabuľkách je vypočítaný priemer za jednotlivé lokality / *Relative yields (%) of varieties set in table are rated to a mean of yield in the location. The last column in the tables is a calculated average value of testing locations.*

2. U znakov, ktoré sú hodnotené bodovou stupnicou 9-1, predstavuje hodnota 9 najlepšia hodnota 1 najhorší prejav / *9 - 1 scale. A high figure indicates that the variety shows the character to a high degree.*

Tabuľková časť / *Table part:*

- doba klasenia a vegetačná doba u ozimín je počítaná od 1. januára
- *(time of ear emergence in case of winter crops is counted from January, 1.)*

odrody

HTZ – Hmotnosť tisíc zŕn -g

DRA - dĺžka rastlín - cm

PPS - počet produktívnych stebiel - ks/m<sup>2</sup>

PRE - prezimovanie - %

DDK - doba do klasenia - dni

VDO - vegetačná doba - dni

PPZ - poliehanie pred zberom ( 9-1)

MTL - múčnatka trávová - list ( 9-1)

MTK - múčnatka trávová - klas ( 9-1)

KLS – komplex listových škvrnitostí pšenice (9-1)

KSP – Klasové škvrnitosti pšenice ( 9-1 )

HPS - hrdza pšenicová ( 9-1 )

HPL - hrdza plevová (9-1)

HTR – hrdza trávová (9-1)

FUZ - fuzariózy ( 9-1)

BIE - bieloklasosť ( 9-1)

- variety

- weight of thousand seeds

- length of plants

- number of production stems

- wintering

- time of ear emergence (days)

- vegetation period (days)

- Standing power before harvest

- Blumeria graminis - leaf

- Blumeria graminis - ear

- Wheat Leaf Spot Disease Complex

- Wheat Ear Disease Complex

- Puccinia recondita

- Puccinia striiformis

- Puccinia graminis

- Fusarium

- white ear -like\*

UTH – úroda v t.ha<sup>-1</sup> ( prepočítaná na 14% vlhkosť)

UTH – yield of grain t.ha<sup>-1</sup> ( as recounted to 14 % grain moisture content)

U%P – úroda v % prepočítaná na priemer kontrol

U%P – yield converted on the average yield of trials

\*poškodenie spôsobené dole uvedeným súborom chorôb napr. diseases eg.

Gaeumannomyces graminis, Pseudocercospora herpotrichoides  
graminis, Pseudocercospora herpotrichoide

\* damage caused by below mentioned complex of

Gaeumannomyces
